

# Mastering Bicep – Infrastructure as Code for Azure

Freek Berson – Esther Barthel

# Agenda

Brief introduction to IaC & Bicep

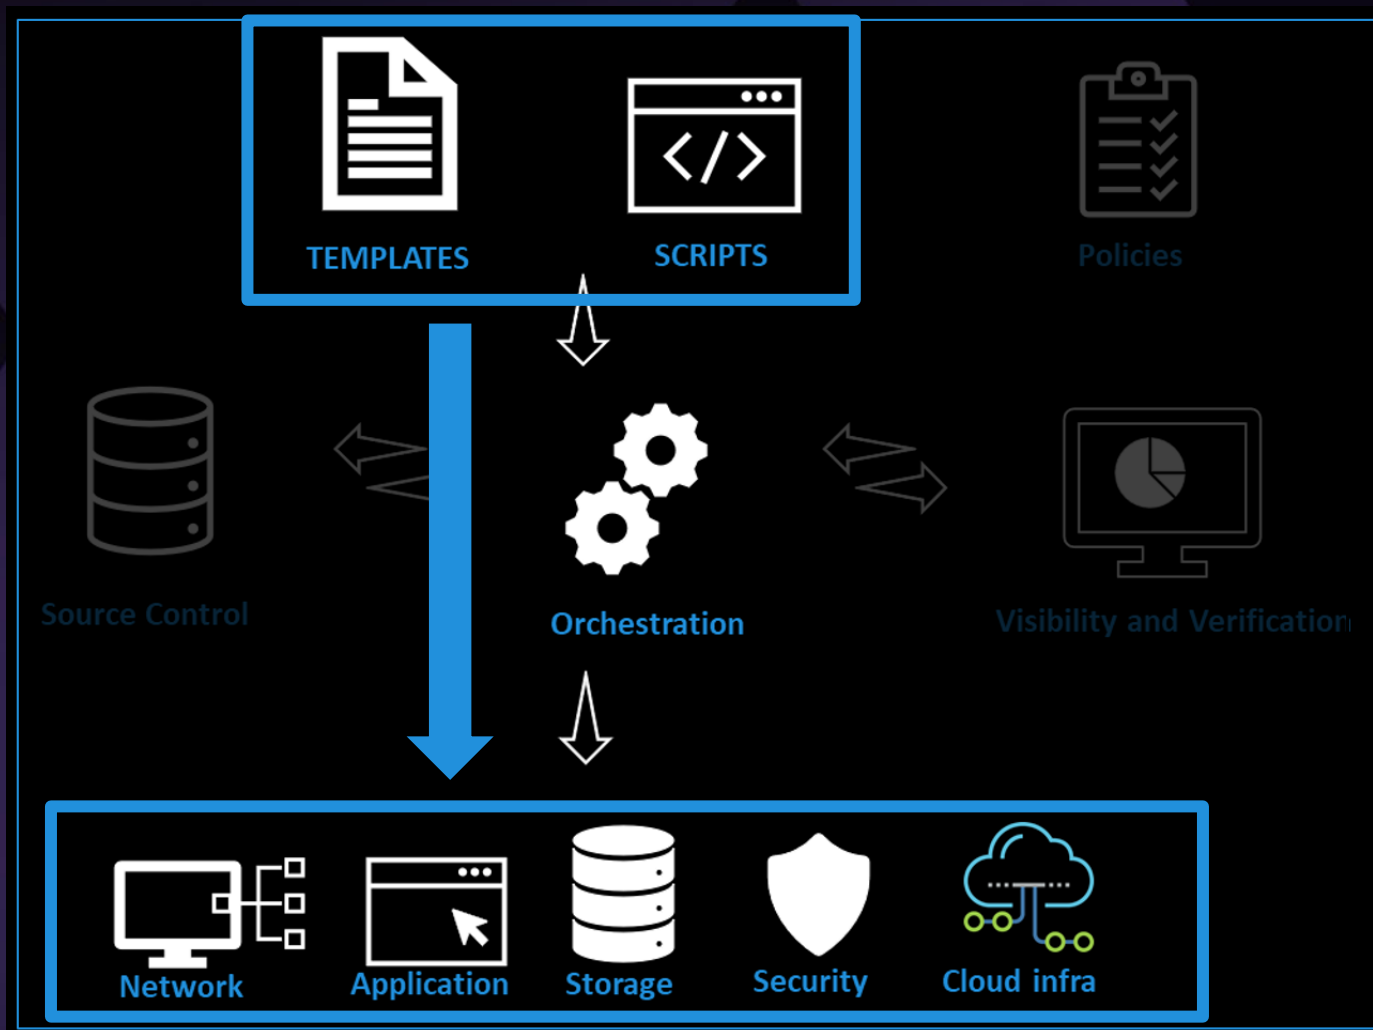

Demos

- - Transitioning from an ARM Template background
- - Modules
- - Deployment Stacks

# Infrastructure as Code (IaC)

"..the process of **provisioning infrastructure resources** similar to how software is deployed."

# ARM Template

## Template format

In its simplest structure, a template has the following elements:

JSON

 Copy

```
{
  "$schema": "https://schema.management.azure.com/schemas/2019-04-01/deploymentTemplate.json#",
  "contentVersion": "",
  "apiProfile": "",
  "parameters": {  },
  "variables": {  },
  "functions": [  ],
  "resources": [  ],
  "outputs": {  }
}
```

# ARM Template complexity

```
605     "hostPoolArmPath": "[resourceId('Microsoft.DesktopVirtualization/hostPools', format('{0}-REMOTEAPP', parameters('hostpoolName')))]"
606   },
607   "dependsOn": [
608     "[resourceId('Microsoft.DesktopVirtualization/hostPools', format('{0}-REMOTEAPP', parameters('hostpoolName')))]"
609   ]
610 },
611 {
612   "type": "Microsoft.DesktopVirtualization/workspaces",
613   "apiVersion": "2019-12-10-preview",
614   "name": "[parameters('workspaceName')]",
615   "location": "[parameters('AVDbackplaneLocation')]",
616   "properties": {
617     "friendlyName": "[parameters('workspaceNameFriendlyName')]",
618     "applicationGroupReferences": [
619       "[resourceId('Microsoft.DesktopVirtualization/applicationGroups', parameters('appgroupName'))]",
620       "[if(parameters('createRemoteAppHostpool'), resourceId('Microsoft.DesktopVirtualization/applicationGroups', format('{0}-REMOTEAPP', parameters('appgroupName'))), '')]"
621     ]
622   },
623   "dependsOn": [
624     "[resourceId('Microsoft.DesktopVirtualization/applicationGroups', parameters('appgroupName'))]",
625     "[resourceId('Microsoft.DesktopVirtualization/applicationGroups', format('{0}-REMOTEAPP', parameters('appgroupName')))]"
626   ]
627 }
628 ]
629 }
630 },
631 "dependsOn": [
632   "[subscriptionResourceId('Microsoft.Resources/resourceGroups', format('{0}BACKPLANE{1}', parameters('resourceGroupProdPrefix'), parameters('resourceGroupPostfix')))]"
633 ]
634 },
635 {
636   "type": "Microsoft.Resources/deployments",
637   "apiVersion": "2020-06-01",
```

# What is Bicep?

*".. Bicep is a **Domain Specific Language** (DSL) for deploying Azure resources declaratively. It aims to **drastically simplify the authoring experience** with a cleaner syntax and better support for modularity and code re-use. Bicep is a transparent abstraction over ARM and ARM templates."*

# Where to position Bicep?

## Intuitive

Easy to read and to author

## Transpiles to ARM Templates

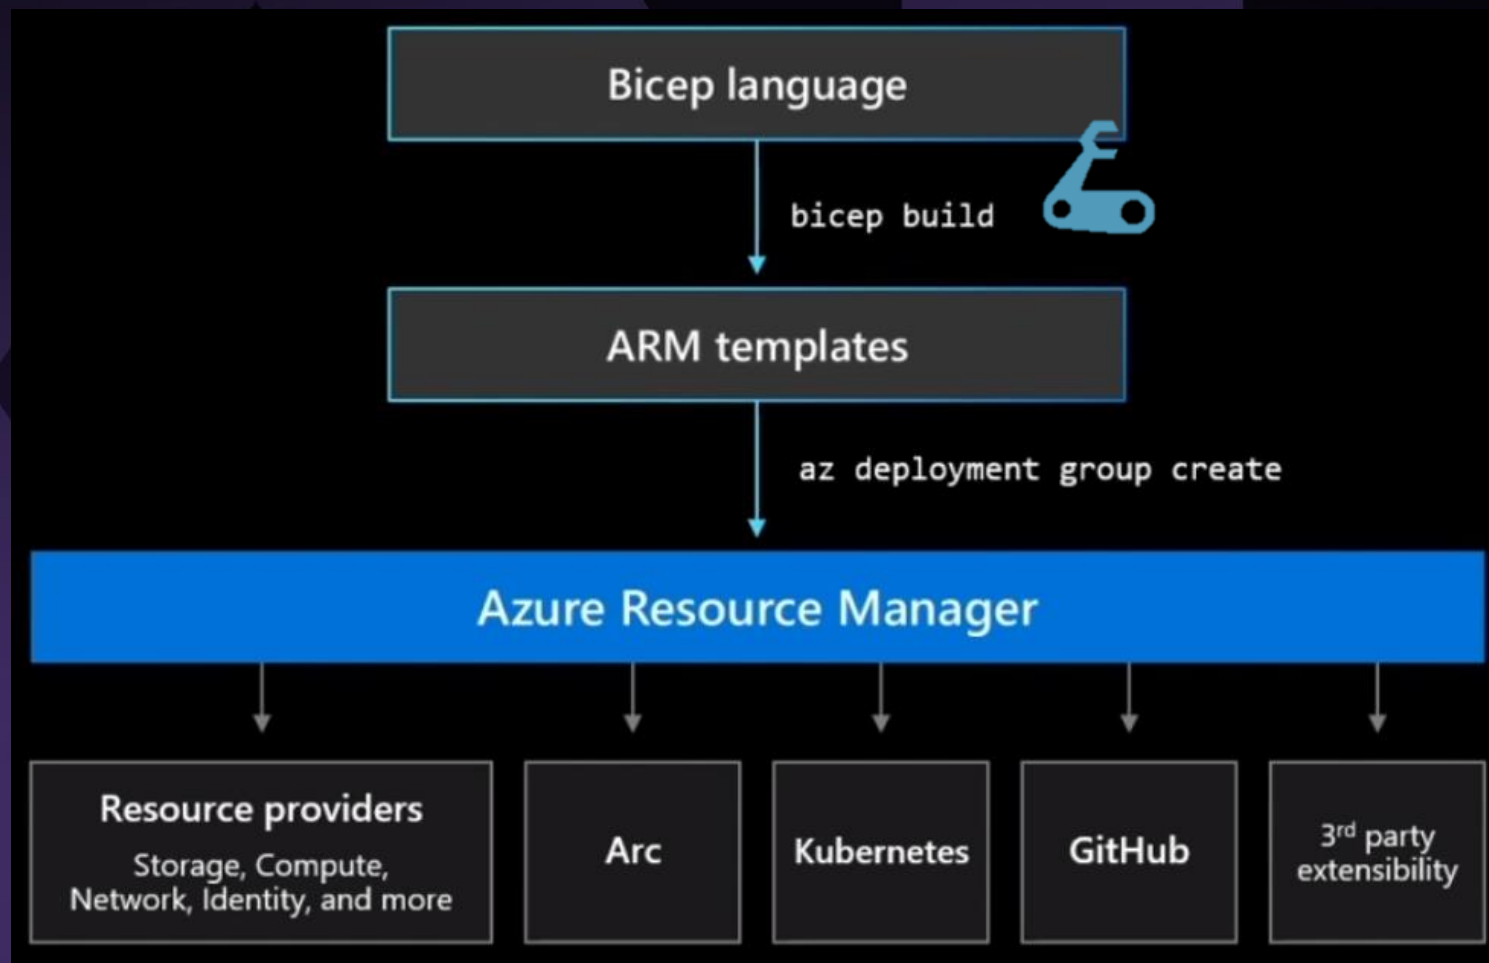

Leverage ARM template knowledge and investments

## Modular

Abstract common blocks of code into reusable parts

## Open Source

Transparency and community

# Demo

Transitioning from an ARM Template background

Modules & registries

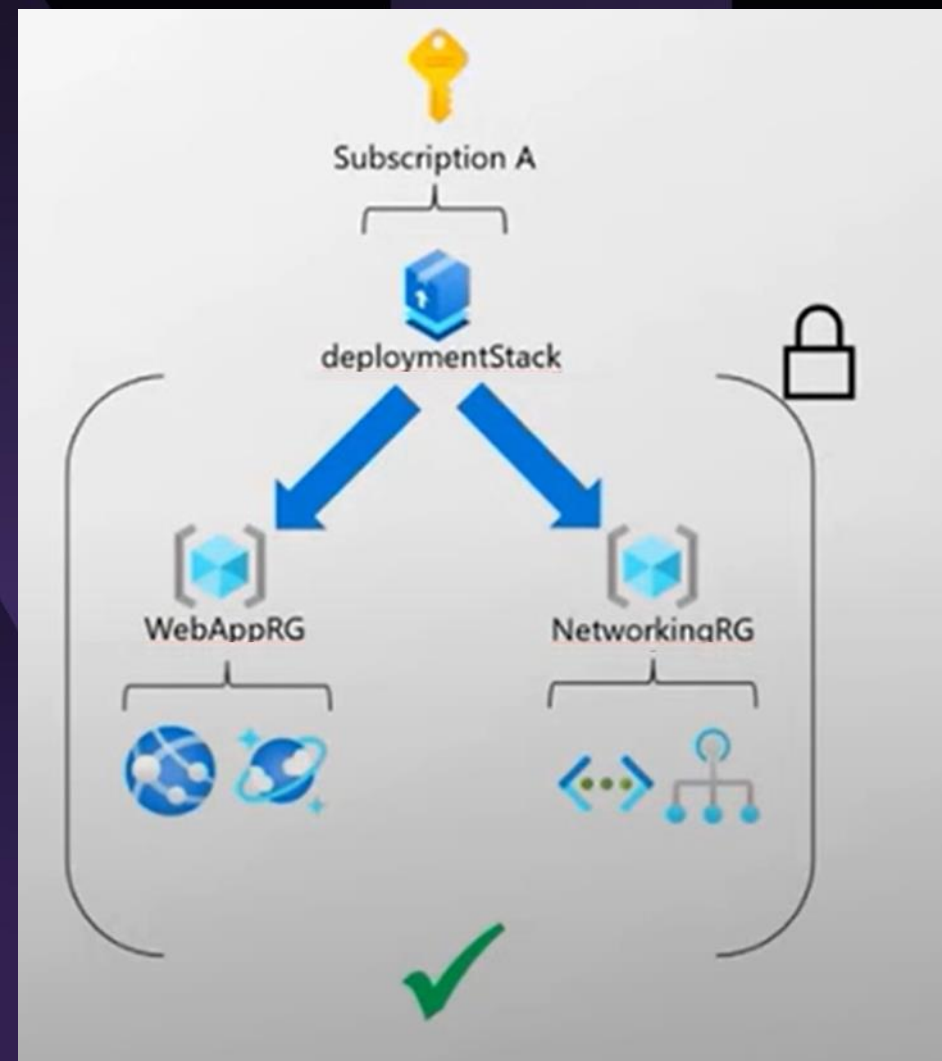

Deployment Stacks

# Deployments Stacks

- Simplified provisioning and management of resources across different scopes
- Preventing undesired modifications to managed resources through deny settings
- Utilizing standard templates such as Bicep, ARM templates, or Template specs
